Foundations of Analog and Digital Electronic Circuits (The Morgan Kaufmann Series in Computer Architecture and Design) By Anant Agarwal, Jeffrey Lang

Unlike books currently on the market, this book attempts to satisfy two goals: combine circuits and electronics into a single, unified treatment, and establish a strong connection with the contemporary world of digital systems. It will introduce a new way of looking not only at the treatment of circuits, but also at the treatment of introductory coursework in engineering in general.

Using the concept of "abstraction," the book attempts to form a bridge between the world of physics and the world of large computer systems. In particular, it attempts to unify electrical engineering and computer science as the art of creating and exploiting successive abstractions to manage the complexity of building useful electrical systems. Computer systems are simply one type of electrical systems.

- +Balances circuits theory with practical digital electronics applications.
- +Illustrates concepts with real devices.
- +Supports the popular circuits and electronics course on the MIT OpenCourse Ware from which professionals worldwide study this new approach.
- +Written by two educators well known for their innovative teaching and research and their collaboration with industry.
- +Focuses on contemporary MOS technology.

Editorial Review

Review

"The book issued by two professors at MIT is intended to initiate a new approach in presenting and developing analog and digital electronics. Traditionally, analog and digital elements and circuits are given in separate courses. Here, the authors want to show that in presenting both topics (analog and digital), a deeper insight of the real problems of the actual electronics is obtained."--Dumitru Stanomir (Bucuresti)

"Elsevier, the academic publishing giant, announced [1] on Tuesday that it will offer a free version of one of its textbooks this fall to students who register for Circuits & Electronics, a massive open online course (MOOC) being offered by edX...The MIT Press text that benefited from a Coursera plug was co-written by Daphne Koller, the co-founder of Coursera. Similarly, the Elsevier textbook that will be featured this fall in Circuits & Electronics was co-written by Anant Agarwal, the president of edX."--Inside HigherEd

"Elsevier announced its plan to provide free content through edX, the online learning initiative founded by Harvard University and the Massachusetts Institute of Technology (MIT) launched in May. Students who enroll in edX's course 6.002X: Circuits and Electronics will have free access to an online version of the course textbook, Foundations of Analog and Digital Electronic Circuits, written by Anant Agarwal and Jeffrey Lang and published under Elsevier's Morgan Kaufmann imprint."--Information Today, Inc.
