The Nature of Consciousness, Structure of Reality By Jerry Davidson Wheatley

This book describes how understanding the structure of reality leads to the Theory of Everything Equation. The equation unifies the forces of nature and enables the merging of relativity with quantum theory. The book explains the big bang theory and everything else.

Editorial Review

From the Publisher

We published this book because it delivers on the promise of its title. It is not another book speculating on what scientists are trying to achieve. The book methodically explains the whole structure of reality and its functional levels. This understanding is then used to answer the big questions of science, philosophy and religion.

A more serious scientist than Jerry Wheatley can not be found. That is evident throughout the book. It is an overwhelming achievement of over thirty years of full time work. The book was released without fanfare.

Jerry began his scientific project with one assumption, namely that nature is uniform. Otherwise, he says, there is no sense in trying to understand anything. Other than that one assumption, he assumed nothing. There is an interesting twist to the second assumption. Years later while trying to understand the nature of spatial expansion from the Big Bang, Jerry recognized a problem. If space is defined by nothing, there is a problem in explaining the Big Bang as an expansion of space. Nothingness is everywhere -- it must extend indefinitely, even beyond the edge of universal expansion. Jerry says, "There is 'nothing' here, there is nothing there -- nothing is everywhere!" Space must be expanding into nothingness -- into itself. How can that be? The answer lies with the ultimate nature of space and the correct understanding of the cosmological singularity.

It is said "physics breaks down" as parameters narrow to the singularity. It means the mathematics breaks down, but it shouldn't and it doesn't. Jerry learned that the most basic elements of mathematics are insufficiently understood. He discovered this while trying to reconcile the expansion of space with the concept of nothingness. If space is nothing, how could it expand as though it were something? Specifically: was space static or dynamic (therefore nonstatic). How could it be both without contradiction? If it is not nothing, then it is not space. So, either there are two types of space or the ultimate nature of space was not properly understood.

When the accepted understanding of mathematics could not supply a noncontradictory answer to the space-nothingness problem, Jerry applied physics (particularly, the law of conservation) to math and discovered that the contemporary understanding of the basic elements of math was flawed. He began to understand why there are paradoxes in math and logic. The problem of space was similar to Russell's Paradox -- "The set of all sets which are not members of themselves." He realized that other paradoxes and Goedel's legacy resulted from insufficient understanding of the basic mathematical elements. Everyone assumed they understood how the basic elements such as zero, one, and infinity relate. But if these elements are not properly understood, then the physics to which these elements are applied will be misconstrued. And indeed, that is exactly what has happened. Appearances are deceiving. To obtain a deeper understanding of reality meant getting beyond apparent definitions.

Certainly, Jerry thought, a system can only be complete when it is also consistent. Yet it is acknowledged that a system is complete only if zero equals one ($0 = 1$). The system Jerry was considering is none other than the complete system denoted reality. After he deciphered the structure of reality and found no inconsistencies in reality's uniformity, he reasoned that perhaps the wrong concept of consistency was applied to a completed system because of insufficient understanding of the basic elements of mathematics. And that is what he found. He reasoned how to prove $0 = 1$. Although the journey to truth was

mindboggling, once he got to the ultimate truth, it was easy to understand. In fact, every child understands the ultimate equation.

From the Author

If we are doomed to die, why is there life at all? What is the meaning to life? Religion did not supply a satisfactory answer. Holy books are constituted of "words on paper." Ideas do not necessarily represent reality. Words and ideas are different from what they represent!

There should be a way to scientifically determine whether life has meaning beyond mere existence. The only way to do this is to map the structure of reality. This is science. Ideas are verified when evidence "in reality" corroborates statement truth.

Understanding the structure of reality was a step by step process. It is similar to a jigsaw puzzle when one has not seen the finished picture. The puzzle is completed only when every piece finds its place. Each piece informs how it fits with other pieces. Pieces mesh into sections. Sections join to show the whole picture.

The analogy comes full circle by substituting scientific facts for puzzle pieces. Pieces represent evidential facts. Scientific understanding relates one fact to others. Puzzle sections correspond to higher-level concepts and principles of physics.

Principles enabled a systematic arranging of the diagrams into a hierarchy to represent what physics is all about -- the structure of reality. The structure defines how everything interrelates. But, it did not immediately answer all questions.

Big questions of philosophy and science are answerable only when the structure of reality is reexamined through the lens of other disciplines. Multidisciplinary research produced a categorical understanding of everything.

From the Inside Flap

Final Test of the Ultimate Principle is the Big Bang Problem:

The Big Bang seems paradoxical. How did it happen? How can it be explained as an expansion of space? Simply:

How does space expand from a singularity? -OR- What is space expanding into -- if not itself?

If space is expanding into itself, then there is a difference between expanding space and the space into which it is expanding. A clear understanding of the Ultimate Principle explains the Big Bang and the nature of the singularity. It also defines the difference between space itself and extended spatiality. It also explains why there was a Big Bang. It passes the final test: It explains cosmogenesis.

Explicitly Defined, Solved and/or Explained:

Nature of Self and Will -- Knowledge and Understanding -- Truth Seeking Methodology -- Why Minds; Why Knowledge -- Why is there Remembrance -- Deductive and Inductive Inference -- Behavior Correlated With Logic/Physics -- Mind-Brain Connection -- Awareness-Consciousness -- Major Philosophical Questions -- Biological Instinct -- Zero, Unity, and Infinity -- Axiomatization of Arithmetic -- Incompleteness of Goedel's Theorems -- Completeness and Consistency of Logic -- Cosmic Evolution -- Entropy and Negentropy -- Meaning of Life and Death -- Religion/Religious Concepts -- Teleological Destiny -- Nature of Functional Processes.

Users Review

From reader reviews:

Katherine Humphrey:

Book is definitely written, printed, or descriptive for everything. You can know everything you want by a book. Book has a different type. To be sure that book is important matter to bring us around the world. Beside that you can your reading ability was fluently. A book The Nature of Consciousness, Structure of Reality will make you to become smarter. You can feel much more confidence if you can know about every thing. But some of you think in which open or reading any book make you bored. It is far from make you fun. Why they can be thought like that? Have you trying to find best book or ideal book with you?

Matthew Gregg:

Information is provisions for individuals to get better life, information presently can get by anyone in everywhere. The information can be a know-how or any news even restricted. What people must be consider while those information which is inside the former life are difficult to be find than now is taking seriously which one is acceptable to believe or which one often the resource are convinced. If you receive the unstable resource then you understand it as your main information there will be huge disadvantage for you. All those possibilities will not happen with you if you take The Nature of Consciousness, Structure of Reality as the daily resource information.

Terry Brown:

Often the book The Nature of Consciousness, Structure of Reality will bring that you the new experience of reading some sort of book. The author style to spell out the idea is very unique. In case you try to find new book you just read, this book very suitable to you. The book The Nature of Consciousness, Structure of Reality is much recommended to you to study. You can also get the e-book through the official web site, so you can quicker to read the book.

Charles Moreno:

This The Nature of Consciousness, Structure of Reality is great publication for you because the content which can be full of information for you who have always deal with world and possess to make decision every minute. That book reveal it data accurately using great arrange word or we can declare no rambling sentences inside it. So if you are read it hurriedly you can have whole facts in it. Doesn't mean it only provides you with straight forward sentences but hard core information with attractive delivering sentences. Having The Nature of Consciousness, Structure of Reality in your hand like having the world in your arm, facts in it is not ridiculous 1. We can say that no guide that offer you world within ten or fifteen moment right but this guide already do that. So , this is certainly good reading book. Hi Mr. and Mrs. occupied do you still doubt that will?
