Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics) By Marcus Brazil, Martin Zachariasen

This book explores fundamental aspects of geometric network optimisation with applications to a variety of real world problems. It presents, for the first time in the literature, a cohesive mathematical framework within which the properties of such optimal interconnection networks can be understood across a wide range of metrics and cost functions. The book makes use of this mathematical theory to develop efficient algorithms for constructing such networks, with an emphasis on exact solutions.

Marcus Brazil and Martin Zachariasen focus principally on the geometric structure of optimal interconnection networks, also known as Steiner trees, in the plane. They show readers how an understanding of this structure can lead to practical exact algorithms for constructing such trees.

The book also details numerous breakthroughs in this area over the past 20 years, features clearly written proofs, and is supported by 135 colour and 15 black and white figures. It will help graduate students, working mathematicians, engineers and computer scientists to understand the principles required for designing interconnection networks in the plane that are as cost efficient as possible.

Editorial Review

Review

“The book presents an interesting and quickly developing area of research and will be useful for researchers working in this area and for those wanting to learn more about geometric Steiner tree problems.” (Yongtang Shi, *Mathematical Reviews*, December, 2015)

“The focus of this monograph is the geometric Steiner tree problem, i.e., how to optimally connect, in a geometric plane, a collection of n given terminals, together with an additional set of Steiner points, in terms of a measuring metric. ... monograph is also intended as a textbook at a graduate level, thus comes with a decent collection of exercises, with varying difficulty degrees, at the end of each chapter, mostly assigned in a relevant context throughout the main text.” (Zhizhang Shen, *zbMATH* 1319.05044, 2015)

From the Back Cover

This book explores fundamental aspects of geometric network optimisation with applications to a variety of real world problems. It presents, for the first time in the literature, a cohesive mathematical framework within which the properties of such optimal interconnection networks can be understood across a wide range of metrics and cost functions. The book makes use of this mathematical theory to develop efficient algorithms for constructing such networks, with an emphasis on exact solutions.

Marcus Brazil and Martin Zachariasen focus principally on the geometric structure of optimal interconnection networks, also known as Steiner trees, in the plane. They show readers how an understanding of this structure can lead to practical exact algorithms for constructing such trees.

The book also details numerous breakthroughs in this area over the past 20 years, features clearly written proofs, and is supported by 135 colour and 15 black and white figures. It will help graduate students, working mathematicians, engineers and computer scientists to understand the principles required for designing interconnection networks in the plane that are as cost efficient as possible.

About the Author

Marcus Brazil is Associate Professor and Reader at the Melbourne School of Engineering, The University of Melbourne, with a background in pure mathematics. He has worked on Steiner trees and network optimization problems for about 18 years, and has written more than 60 papers in this area, both on the theory of optimal network design and on industrial applications to Wireless Sensor Networks, Telecommunications, VLSI Physical Design, and Underground Mining Planning.

Martin Zachariasen is Head of Department and Professor at the Department of Computer Science, University of Copenhagen. He has worked on heuristics and exact methods for classical NP-hard problems, such as the geometric Steiner Tree Problem, as well as other optimization problems. His general research interests are in experimental algorithmics and computational combinatorial optimization, in particular related to VLSI design. As well as writing more than 40 papers on these topics, he is one of the developers of GeoSteiner, which is by far the most efficient software for solving a range of geometric Steiner tree problems.

Users Review

From reader reviews:

Gale Taylor:

Spent a free time for you to be fun activity to try and do! A lot of people spent their sparetime with their family, or their particular friends. Usually they carrying out activity like watching television, about to beach, or picnic inside park. They actually doing same thing every week. Do you feel it? Do you want to something different to fill your own personal free time/ holiday? Might be reading a book is usually option to fill your no cost time/ holiday. The first thing you ask may be what kinds of reserve that you should read. If you want to attempt look for book, may be the publication untitled Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics) can be good book to read. May be it might be best activity to you.

William Burns:

The reason? Because this Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics) is an unordinary book that the inside of the e-book waiting for you to snap this but latter it will distress you with the secret that inside. Reading this book close to it was fantastic author who else write the book in such wonderful way makes the content on the inside easier to understand, entertaining technique but still convey the meaning thoroughly. So , it is good for you because of not hesitating having this anymore or you going to regret it. This amazing book will give you a lot of benefits than the other book possess such as help improving your talent and your critical thinking way. So , still want to hold off having that book? If I were being you I will go to the reserve store hurriedly.

Sergio Espinoza:

Is it anyone who having spare time and then spend it whole day by simply watching television programs or just lying on the bed? Do you need something totally new? This Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics) can be the answer, oh how comes? A fresh book you know. You are so out of date, spending your extra time by reading in this brand new era is common not a nerd activity. So what these textbooks have than the others?

Carrie Francis:

As we know that book is very important thing to add our understanding for everything. By a publication we can know everything you want. A book is a list of written, printed, illustrated or even blank sheet. Every year had been exactly added. This e-book Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics) was filled in relation to science. Spend your free time to add your knowledge about your technology competence. Some people has various feel when they reading some sort of book. If you know how big benefit from a book, you can really feel enjoy to read a publication. In the modern era like today, many ways to get book that you simply wanted.
